 June Park

Summary

Software Engineer with 9 years of hands-on experience across diverse tech stacks, from early-stage startups to FANG-scale systems. Adept in designing and delivering robust software solutions using modern languages, frameworks, and cloud platforms.

Open to impactful work.

Skills

Programming Languages: TypeScript, Python, C/C++, Ruby, Java, MATLAB

Tools & Platforms: Bazel, PostgreSQL, Mercurial, Git, Pands, Raylib, XCode

Web Frameworks: Django, Rails, React, Flask

DevOp: Plummi, Heroku, DigitalOcean, AWS, Google Cloud

Language: English, Korean, Japanese

Experience

Microsoft

United States

MEMBER OF TECHNICAL STAFF

Oct 7, 2025 - Present

- Served as an engineering leader for Copilot Tasks, helping bring agentic workflows from answers to actions for millions of users.
- Served as a technical leader and foundational engineer for AIX Harness, the execution layer powering the Copilot SuperApp through agent orchestration, context management, and multi-model coordination.
- Created the repository and led engineering for two core SuperApp tabs built natively on AIX Harness.
- Helped lead the SuperApp codebase while delivering foundational infrastructure and product features across multiple codebases in nine months.

Meta

San Francisco, CA, USA

SOFTWARE ENGINEER

Oct, 2024 - Oct, 2025

- Took initiative on Channel Value Rule, targeting the 16% of ad traffic with both app and web destinations to improve value attribution and ROI.
- Built full-stack features using React and Hack/GraphQL, contributing to scalable, production-ready systems.
- Partnered with data science to design A/B tests and analyze revenue impact of ads destination.
- Proposed and implemented alpha improvements to internal testing infrastructure, reducing test time by 50% and enhancing developer velocity.

Warner Music Group

Toronto, ON, Canada

TECHNICAL LEAD ENGINEER

July, 2023 - Sept, 2024

- Implements bazel structure for the company for TypeScript and JavaScript code base for hermiticity and stablishing standards for JavaScript and
- TypeScript testing and code structures.
- Led a team of five engineers in building GraphQL endpoints for client-facing applications using Apollo and AppSync, supporting over 2000 RPS and auto scaling depending on request values.
- Improved application response times by up to 85% for graphql response by updating database schema and SQL queries, eliminating N+1 queries and lack of indexes.
- Developed CI/CD pipelines for backend structures.
- Designed infrastructure for pub/sub, caching, and media processing logic.

Google

Toronto, ON, Canada

SOFTWARE ENGINEER

Feb, 2022 - July 2023

- Implements and maintained new features relating to App Script across google workspace platform including Gmail, sheets, and Docs.
- Improved a response time and render time of App Script hover card components.
- Collaborated with a team of developers to ensure timely and accurate delivery of features.
- Conducted user testing and gathered feedback to iterate on features for optimal user experience.

Everlywell

Toronto, ON, Canada

SOFTWARE ENGINEER

December, 2020 - Jan, 2022

- Maintained Amazon amplify apps to create and deploy React web applications for companies such as NBA, Tinder, and other companies for COVID-19 at-home test kits.
- Implemented a script that helps accurately access and refund unused covid test kits; helping company save up to 200,000 USD.
- Created several Rails controllers for internal purposes; mocking end to end user experience for QA, mass refund features for CX department, and more, ultimately reducing support tickets amount by 50 percent.
- Implemented an audit table to help debug problems and logged which process was responsible for the change of the record using PaperTrail gems

Spiria

Oakville, ON, Canada

SOFTWARE ENGINEER

October, 2018 - October, 2020

- Constructed RESTful API endpoints in multiple different frameworks such as Django, Ruby on Rails, and Flask and automated API documentation process using swagger.
- Designed custom rake tasks for importing production data into newly updated data structure to meet client's needs.
- Maintained or updated staging/productions servers. Debugged problems in production postgres database using ssh and postgres console on Heroku or AWS servers
- Collaborated in creating automation python scripts for websites and application using selenium covering for QA eliminating 80% of QA's manual work

Apex Score

Oakville, ON, Canada

SOFTWARE ENGINEER

September, 2019 - October, 2020

- Developed custom Shapley value regression model to calculate importance of independent variables of data sets using sklearn, pandas, and numpy.
- Created custom image uploader to Amazon s3 bucket using boto3 library.
- Built RESTful API application using Flask framework and automated extensive API documentation pages using flask-restplus, pytest, and swagger, covering 95% of the code base.
- Created an interactive graph using D3.js in Vue.js with data from Flask backend API.

Education

University of British Columbia

Kelowna, British Columbia

BACHELOR OF SCIENCE IN PHYSICS

2014 - 2018
